

Saufrenator 90° gr cu 3 diuti ANTIVIBRATIE

Calitate: HSS-E + Red-X

The equal division 3 x 120° of the flutes offers good results in most materials. For iron alloys vibrations may happen and generate facets. These new ANTI VIBRATION countersinks with unequal division of the flutes avoid this phenomenon. For machining of the copper and light materials (aluminium, plastics) we recommend the use of the deburring tool with hole.

Canale larg deschise =
evacuare puternica a spanului

Geometrie **ANTIVIBRATIE** =
terminatie inegala

profil detalonat constant =
numeroase reascutiri

Standard

ANTIVIBRATIE

Concurenta

HSS 5% Cobalt + acoperire RedX
3500 HV = **performanta crescuta**
